

CHEMICAL POLICY FOR PRODUCTS

“Royal Safe Company KB” is committed to manufacturing furniture that is safe for our customers, our employees, and the environment. This policy establishes our strategy for the selection, screening, and management of chemicals and materials used in all our products. This policy applies to all components, finishes, and raw materials sourced for Royal Safe furniture.

Regulatory Compliance

We pledge to comply with all applicable environmental laws, regulations, and standards regarding chemicals in products. This includes adherence to requirements at the local, regional, national, and international levels across all jurisdictions where our products are manufactured and sold.

Chemicals of Concern Strategy

Royal Safe maintains a rigorous "Chemicals of Concern" strategy. We prioritize the elimination of hazardous substances to protect human health and the environment.

- **Strict Restriction:** Royal Safe explicitly prohibits the use of any chemical constituents that appear on the EU REACH and UK REACH Substance of Very High Concern (SVHC) Candidate List.

Design for the Environment (DfE)

Our chemical management is integrated into our Design for the Environment strategy. During the product development phase, we evaluate the chemical profile of materials to:

- Prefer "benign by design" alternatives.
- Reduce the overall chemical complexity of our products.
- Ensure that the chemicals used do not hinder the recyclability of the furniture at the end of its life.

Life Cycle Thinking

Royal Safe applies Life Cycle Thinking to identify potential chemical risks. We evaluate impacts not just during the manufacturing stage, but also during raw material extraction, the consumer use phase (indoor air quality/off-gassing), and final disposal or recovery.

Consistency with Management Plans

This policy is the guiding document for our Chemical Management Plan. We ensure that our procurement teams, designers, and suppliers are aligned with these standards. Suppliers are required to provide transparency regarding chemical constituents to ensure our inventory remains compliant with our SVHC-free commitment.

Public Disclosure

In alignment with our commitment to transparency, this policy is documented, implemented throughout our supply chain, and made publicly available to all stakeholders via our official communication channels.
